(54) VOICE PAGER WITH AUTOMATIC DIAL FUNCTION**(57)Abstract:**

PURPOSE: To provide a voice pager with which automatic call origination is instantaneously enabled by solving timewise problems in the case of automatic call origination, with respect to a voice pager.

CONSTITUTION: The data demodulated by a radio signal receiving and demodulating circuit 8 are identified into desired dial number data and voice message data by a signal class discriminating part 11, and the respective data are stored in data banks as independent data. A user can listen to a message in voice by reproducing the stored voice message while using a voice converting part 19 and can extract a desired dial number paired with the separately stored voice message as the oscillated sound of a dial tone corresponding to the message. At such a time, it is enough only to oscillate the dial tone while letting the voice pager get close to the transmitter of a telephone.

**LEGAL STATUS**

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of
rejection]

[Date of requesting appeal against examiner's
decision of rejection]

[Date of extinction of right]
